ZIMA

Task:
Following are the tasks you have to complete during your Pre-Intership:

Day 1 Tasks:

- Register user using form (name, email, password, phone, country etc) .
- Login user api (create login token) and login for web page.
- Send mail template when user register and login.
- Show the register user in the table, add view button which show all the detail of the user in next page.

Day 2 Tasks:

- Show the register user in yajra datatable.
- Make a crud function of the user. Using jquery .

Day 3 Tasks:

- Register user graph according to the country. (canvas js graph).
- When user click on any country which is in the graph, the user redirect on the new page and that page only show the user data, which belongs to that country. Data is show in the yajra table.

Day 4 Tasks:

- Apply the date filter on register user yajra table.
- Apply the country filter on register user yajra table.
- Add the toogle button in the table to change the status of the user. (active,block).
- Download the excel file of the user.

Day 5 Tasks:

- Make a daily user register graph.
- Make a country table separate and now pass the country id in the user table and make all the flow according to that .

Day 6 Tasks:

- Make a user_details table separate and now apply the crud according to that.
- Upload the image of the user on Firebase and save the url in database.
- Send the mail through job and queue concept.

Day 7 Tasks:

- Make the apis for the crud functions.
- Get the IP address of the user and save it in to the database.

- Make custom filters when the api have a country id, then select the user of that country, and order by ascending, descending also added in that filter api.
